HighTop Offers New Twelve-Five Security Course!

Fargo, ND, -- October 05, 2009 – Required training for professional pilots has been increasing for a number of years. The ability to deliver this training without wreaking havoc to pilot availability and schedules is becoming an increasing burden for flight department managers. HighTop now offers the Twelve-Five Standard Security Program (TFSSP) through a secure online portal to help ease the delivery, tracking and reporting of the course and to ensure one-hundred percent flight department compliance.

“With this course and the additional support that we will provide, flight department managers will truly reduce their workload and headaches substantially as they administer the twelve-five program”, said Steve Leon, President of HighTop. This 60-minute course has been reviewed and found to be compliant by the TSA and meets both the initial and recurrent security training requirements for flight personnel. As part of HighTop’s new program, HighTop will ensure the proper paperwork is completed and will assume audit support sending TSA requested reports and program details whenever or wherever needed. Processes are in place to reduce yearly paperwork and finger printing
